whilst the body has recently assumed greater sociological significance there has been less engagement in social work and social care on the bodily experience of health illness and disease this innovative volume redresses the balance by exploring chronic illness and social work through the specific lens of autoimmunity engaging in wider debates around vulnerability resistance and the lived experience of ongoing ill health moving beyond existing conceptualisations of vulnerability as an issue of mental distress ageing child protection and poverty price and walker demonstrate the role that society has to play in actively engaging the physical body rather than working around and through it the book focuses on auto immune conditions such as lupus multiple sclerosis rheumatoid arthritis and scleroderma conditions like these allow for an exploration of the materiality of illness which exacerbates social and economic vulnerability and may precipitate personal and social crises requiring a variety of interventions and support the risks and challenges associated with chronic illness include disruptions to a sense of self and identity altered

relationships and the renegotiation of roles and responsibilities in a variety of relationships in addition to an economic impact with the potential for disruption to employment status and financial insecurity this text opens up a range of debates around some of the central concerns of the social work profession including vulnerability ill health and independence it will be of interest to scholars and students of social work nursing disability studies medicine and the social sciences

the primary objective of this handbook is to provide statements about health behaviour research as a basic body of knowledge moving into the 21st century it is expected that the handbook will remain in use and current through 2005 at least the handbook presents a broad and representative selection of mid 1990s health behaviour findings and concepts in a single work while texts and books of readings are available in related areas such as health psychology medical anthropology medical sociology behavioural health behavioural risk factors and changing health behaviours none of these works was intended to address basic research generated knowledge of health behaviour and none was intended to transcend individual disciplines accordingly none of these works presents a broad and representative spectrum of basic health behaviour research reflecting multidisciplinary activities one work with a title identical to this one but for one word the handbook of health behaviour change shumaker et al 1990 deals almost exclusively with applications this handbook thus presents the reader with the state of the art in health behaviour research something not found elsewhere

note this edition features the same content as the traditional text in a convenient three hole punched loose leaf version books a la carte also offer a great value this format costs
