the science of geology was constructed in the decades around 1800 from earlier practices that had been significantly different

in their cognitive goals in the studies collected here martin rudwick traces how it came to be recognised as a new kind of natural science because it was constituted around the idea that the natural world had its own history the earth had to be understood not only in relation to unchanging natural laws that could be observed in action in the present but also in terms of a pre human past that could be reliably known even if not directly observable and its traces only fragmentarily preserved in contrast to this radically novel sense of nature s own contingent history the earth s unimaginably vast timescale was already taken for granted by many naturalists though not yet by the wider public and the concurrent development of biblical scholarship precluded any significant sense of conflict with religious tradition a companion volume lyell and darwin geologists studies in the earth sciences in the age of reform was published in 2005

in the preparation of this book the author has attempted to present in popular form the salient points of a general survey of the whole great science of geology the science which deals with the history of the earth and its inhabitants as revealed in the rocks the use of technical and unusual terms has been reduced to a minimum compatible with a reasonable understanding of the subject by the layman each of the relatively few scientific terms is explained where first used in the text and a glossary of common geological terms has been appended the matter of illustrations has received very careful attention and only pictures maps and diagrams are used which actually illustrate important features of the text a special point has been made to introduce only cuts of simple construction comparatively free from technicalities nearly every illustration is accompanied by a really explanatory title a number of the pictures are from the author s collection of photographs and many of the line cuts have either been made or considerably modified by the author among the numerous sources of illustrations special mention should be made of the united states geological survey the new york state museum the american museum of natural history the university of chicago press and various individuals full credit being given wherever due
