there were about 12.7 million visits to accident and emergency and aande services in the last year and in around a fifth of these patients were admitted to hospital and departments are only one in a variety of nhs emergency care providers which include ambulance services gps primary care trusts out of hours services nhs direct and open access minor injury centres this nao report examines the extent of progress made towards achieving the key

target for maximum total time spent waiting for aande services as well as with the wider modernisation of emergency care the report s conclusions include that given the high level of demand there has been a significant and sustained progress towards reducing waiting times in aande departments and improving the patient s experience largely due to improved working practices and increased local investment however there is further room for improvement in the case of patients with more complex needs such as older people and those with mental health needs and regional variations still exist with the performance of the worst performing trusts still some way behind further major improvements will depend on tackling the remaining bottlenecks and barriers to modernisation within wider emergency care services the establishment of local emergency care networks is highlighted as a promising development as a means to secure greater emergency care service integration and joint working

it is refreshing to review a book that doesn t claim to include everything but literally provides a foundation by focusing upon key areas within emergency care to borrow that hackneyed phrase it does what it says on the tin tim barr cardiff university uk the foundations of emergency care is an accessible text that brings together both academic and clinical experts to combine coverage of the clinical skills and underpinning theoretical knowledge essential to practice within the modern emergency setting using an evidenced based and protocol driven approach this clinical companion guides readers through a multitude of common patient scenarios to help them acquire essential skills in assessment and priority assignment in an emergency care setting each chapter includes scenarios that utilise common emergency care presentations to clearly demonstrate how practitioners can identify critical illness at an early stage through understanding how disease and illness affect normal physiology and how this relates to the patient s clinical presentation this ability to critically analyse physical findings assists the practitioner

in becoming a specialist and directly saves lives key areas covered include cardiac emergencies including the new 2006 als guidelines head injuries acute surgical emergencies gynaecologic and obstetric emergencies respiratory distress paediatric emergencies minor trauma and illness major trauma acute medical emergencies the book also includes scenarios that cover the treatment of the elderly and those presenting with mental health emergencies this important new book encourages readers to reflect on their clinical encounters to gain further insight into relevant treatment options and illustrates how critical thinking can be applied in emergency care essential reading for healthcare professionals working within emergency care and students requiring the fundamental skills necessary to competently undertake patient assessment and correctly prioritise patient care
